 noAlbum v 0.1

Welcome to noAlbum!

Are you also annoyed about the fact that every time you start *iPhoto* you get a complete list of every album available as screensaver? Especially private albums or pictures of your last books sold at eBay or the last birthday party of your boss fired you a week ago. Do you think that because of this behaviour it is impossible for you to select the "Use random screen saver" feature of the ScreenSaver? Want to get rid of this behaviour? This app is for you.

Features

It simply removes your *iPhoto* albums from the screensaver and desktop picture album list.

System Requirements

Mac OS 10.2 and above.

Installation

Pretty simple: Just copy the file named *TameThePhoto* to any convenient place. That's it! Additionally you have to install the scripting addition "Property List Tools.osax" from late Night Software Ltd.: http://www.latenightsw.com.

Using

Everytime you want to start *iPhoto* start this application instead. That's it. The app will launch *iPhoto*. If you finished *iPhoto* or *noAlbum*, the other application will follow shortly after the termination of the first program. When both applications has finished the albums in the screen saver pane has been deleted.

History

v 0.1   - first public release

Costs

None, it is completly free.

Disclaimer

Use this program on your own risk! There is no guaranteed behaviour of this program. Maybe your entire disk will be wiped out by using this program (of course, it shouldn't;-) Don't blame me for any bugs or problems, related or not by using this program. You have be warned!
