

Dear customers,

RE: Free of charge of using Pegcon ERP

Pegcon ERP (also known as **Smart Accountant™**) is one of the most powerful accounting and Enterprise Resource Planning (ERP) systems in Hong Kong from Pegcon Consulting Company Limited.

Pegcon ERP has been targeting on the Small and Medium Enterprises (SME) in Hong Kong since 1997. And now, Pegcon migrate services from SME to corporations and the corresponding ERP software will be promoted later. Pegcon Consulting is a subsidiary of Omnicon Group, a leader in Display and Semiconductor business. Our sales revenue in 2004 is US\$100 million.

Many companies still do not adopt computerized system and make use of the ERP system to eliminate duplicated data entry and boosts operation efficiency significantly. This is even more serious that financial status of a company is buried in the piles of account paper statement.

The goal of Pegcon is to popularize ERP systems. It has been shown very often that SME companies could not afford the price (HK\$18,000.00 for the system and HK\$2000 for additional license) of a system and how to maintain it.

It is for this reason we will open this system to all HK companies as a freeware. Pegcon will charge only if end customer needs further consulting service or modification. However, given SME operation procedure and their requirement, the system could work perfectly without further modification and assistance from us.

A free installment CD will be couriered to the company at the company's charge.

Should you have any queries, please free feel to contact us at (852) 27571262.
