Tuna Assist Help
Entering in Fish Mortalities Records

There are several ways to enter in Fish Mortalities into the system and both of these are recorded against the Mortality Count in the Summary Farm Report so only use one of these methods to record them.

Method 1 Entering in the Mort Trip through Morts and Diving Menu

If you collect your morts via a special diving trip then this is the screen you should be using to capture the details of the trip.

The following screen is related to the previous one and is the actual Cage that was dived on to recover the morts.

Mort Cage Record

Details | Dive Info | Air Supply | Environment | Observations | Cage / Net Info

Dive Date 19/04/2005 ?	Dive Time 11:14
Vessel Name	
Fish Id ?	Fish Count 0
Cage Id	Date Assigned

Method 2 Capturing Mortalities from the Feeding Trip Cage Screen

If you retrieve your morts from a feeding trip then this is the screen you should be using.

Every Trip Mort record is a actual fish so this can be more data typing then the other method if you have many mortalities.

Feeding Trip Cages

Details | **Environment Monitoring** | **Mortality Info**

Total Morts `0`   Total Weight kg `0`

Trip Morts:

Record Id	Weight kg	Length cm	Scale Loss	Tow Dam...	Mes...	Ey
